PROFILE

Full-stack software engineer with strong system design instincts and hands-on experience building scalable, multi-tenant architectures. Comfortable across the entire stack, from async backend pipelines to polished user interfaces. Leverages AI and LLMs as practical engineering tools, not buzzwords.

EXPERIENCE

Founder & Software Engineer — July 2025 - Present
YJ Tech Ventures — *Remote, USA*

- Designed and shipped full-stack web apps for fintech and entertainment clients, handling 10K+ concurrent users
- Built performant, accessible interfaces using React, Next.js, and CSS-in-JS with attention to layout and animation
- Deployed on Netlify and Vercel with CI/CD pipelines, reducing deployment time by ~40%
- Implemented WCAG accessibility and responsive design ensuring inclusive cross-platform experiences

Programmer Intern — Jan 2025 - Sept 2025
VerdeVista Investment Group — *Remote, USA*

- Built automation scripts and AI-powered tools (Apps Script, JavaScript, Python), cutting manual research time ~35%
- Participated in code reviews and contributed to development standards for internal tooling

Software Engineering Intern — Mar 2023 - July 2023
4L Data Intelligence — *San Ramon, CA*

- Optimized Python web scraping scripts, increasing data collection efficiency by 20%
- Built tools to organize real-time data, supporting healthcare providers with actionable insights

PROJECTS

Clovent, AI Real Estate CRM | *Next.js 16, React 19, Supabase, OpenAI GPT-4o, MapLibre*

- Architected a multi-tenant CRM with Supabase RLS workspace isolation, auth, and role-based access control
- Built multi-agent AI chat system with tool calling, NDJSON streaming, and artifact rendering for 14+ agent tools
- Implemented OCR pipeline using GPT-4o Vision to extract structured lead data from open house sign-in sheets
- Integrated Gmail OAuth, follow-up sequences, PostHog analytics, and interactive maps with geocoding

SentinelDocs, Law Enforcement Report Automation | *Next.js 15, Express 5, PostgreSQL, BullMQ, AWS S3, Python*

- Built an async video processing pipeline: S3 upload, BullMQ queue, Python/FastAPI transcription (Whisper), GPT-4 extraction
- Designed multi-tenant data model with TypeORM migrations, JWT auth, and RBAC for officer/admin roles
- Implemented PDF report generation from AI-extracted structured data with configurable form template mapping

AI Legal Evidence Review Tool | *Next.js 16, React 19, Supabase, OpenAI GPT-4o, React Flow*

- Engineered a 3-layer contradiction detection system: deterministic conflict rules, computational mismatch analysis, and GPT-based inferential reasoning
- Built claims extraction pipeline with entity resolution and canonical predicate normalization across documents
- Designed interactive investigation map with React Flow, tag filtering, and exportable HTML analysis reports

EDUCATION

University of California, Santa Cruz — June 2023 - June 2025
Bachelor of Science in Computer Science — *Santa Cruz, CA*

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, C/C++, HTML/CSS, SQL, GraphQL
Frameworks & Libraries: React, Next.js, Node.js, Express, FastAPI, TypeORM, TSOA, Tailwind CSS, MaterialUI
Tools & Infrastructure: AWS S3, Supabase, PostgreSQL, Redis, BullMQ, Docker, Git, CI/CD, Vercel, OAuth, JWT
Specializations: AI/LLM Integration, Async Pipelines, Multi-Tenancy, RBAC, Web Accessibility (WCAG), REST API Design
